Reffuveille Industrie seeks the expertise of Bürkert France

COOPERATION WITH REFFUVEILLE INDUSTRIE

As a leading partner for pharmaceutical projects, the Bürkert Group provides comprehensive and customised solutions to meet the challenges of the most complex and demanding industrial processes.

The expertise of Bürkert France was sought by Reffuveille Industrie, a company specialising in stainless steel piping and boiler making as well as in industrial processes for the food processing, pharmaceutical and cosmetic sectors based in La Manche.

Since 1973, Reffuveille Industrie has offered its expertise to France and internationally to deliver turnkey solutions – from project definition to commissioning. The company is able to design and manufacture manifolds, skids, as well as standard and custom tanks.

To meet the needs of an international American group operating in 20 countries and specialised in pharmaceutical, cosmetic and food processing activities, Reffuveille Industrie and Bürkert France joined forces to create a distribution and mixing skid for the development of a silicone water solution intended for lubricating certain parts. This skid is equipped with 93 manual diaphragm valves – type 3232, 55 pneumatic diaphragm valves with IO-Link housing, ELEMENT range, type 8801 DF (type 2103 and 8691), as well as 4 FLOWave flowmeters, type 8098.

HOLDING SILICONE

“We are concluding a successful collaboration with Bürkert France for the realisation of a skid equipped with manual valves, flowmeters, on/off valves and regulation using the IO Link communication protocol, intended for the American market. Bürkert’s support in defining the technical specifications of the equipment and providing assistance in the field has been a real asset. Not to mention the fair pricing and the fact that everything happens according to schedule. The first installation was designed in such a way as to eventually integrate a second skid, thus allowing for increased production capacity and also serving in a backup capacity.”

Mathieu Pays, Business Manager and Head of the Design Office at Reffuveille Industrie
